

CLAIMS

1. A dull coated printing paper in which a coating layer comprising a pigment and an adhesive is formed on a base paper containing an organic compound having an action to inhibit binding between pulp fibers and calender treatment is carried out so as to produce the coated printing paper having a density of 0.90 to 1.15 g/cm³.
2. The dull coated printing paper according to claim 1, wherein the line pressure for said calender treatment is 50 to 150 kg/cm.
3. The dull coated printing paper according to claim 1 or 2, wherein the degree of sheet gloss is 35 to 60%.
4. The dull coated printing paper according to any one of claims 1 through 3, wherein said organic compound having an action to inhibit binding between pulp fibers is an organic compound which causes a decrease in the tensile strength of a base paper (measured in accordance with JIS P 8113) comprising 0.3 part by weight of said organic compound admixed with 100 parts by weight of bone dry pulp, at a rate of decrease of 5 to 30% as compared to the tensile strength of a base paper without the admixing of said organic compound.
5. The dull coated printing paper according to any one of claims 1 to 4, wherein said pigment in said coating layer comprises 20 to 100 parts by weight of kaolin having a volumetric particle size distribution of 65% or more within the range of 0.4 to 4.2 μm per 100 parts by weight of the pigment.
